Hi there,
Please find attached the agenda and support docs for our EB call tomorrow. Also, corresponding with #6, I've included the note from Kevin's attachment below the agenda for quick reference.

Talk soon,

David

Executive Board Meeting

Wednesday, August 9, 2017

9:00-11:00am PDT/12:00-2:00pm EDT

[REDACTED], Access code [REDACTED]

International Dial-in number: [REDACTED] (toll charges apply)

Agenda

1. Management team and admin updates

USAID team news

Budget planning, status of ceiling and country cap revisions, etc.

Workplan coordination updates and GHSA Phase 1 country plans

M&E meeting updates

All-country meeting – January 8-12 in Brussels – rolling out details to country teams

Upcoming call schedules

2. September 11-13 semi-annual consortium meeting draft agenda & plans (attachment)

3. Release of data and findings discussion

4. EB member EIDITH data access

5. **Mission communications round-up**
6. **Cave bat diversity manuscript (Kevin – 2 attachments)**
7. **Outbreak updates** (influenza in Myanmar, others?)
8. **Global Virome Project update (Jonna/Chris/Peter/Eddy)**
9. **Operations Team updates:**

Surveillance (Chris)

Behavior (Leilani on vacay but have update from Billy)

Lab (Tracey & Simon)

M&A (Peter)

IM (Damien)

EHP (Brian)

Capacity (Woutrina on vacation)

10. EPT partner coordination updates (Billy)

Standing items: Related grant proposals, conferences, publications updates...

- Uganda workshop – synthesis of national workforce needs (August 22-24, 2017)
- GHSA ZDAP meeting in Da Nang, Viet Nam (August 28-30, 2017)
- Global MERS-CoV Technical Meeting in Geneva (Sept. 26-28, 2017)

6. Cave bat diversity manuscript context...

Dear PREDICT EB,

The following abstract is for an invited manuscript for the MDPI journal *Diversity*, for a special issue on Cave Microbial Diversity that has come together since the last EB call. This review includes a small, targeted analysis of viral richness and sharing in cave bats vs. non-cave bats using data from the literature. A dataset that included 37 publically available bat species-virus associations from the PREDICT-1 HealthMap site was also explored and could be included if the EB agrees. These 37 datapoints only include bat and virus species names as pulled from HealthMap (i.e. no sequence data, specimen-specific, or country information included) representing new host associations not previously documented in the literature for ICTV-named viruses. *Also attached is a table that shows specific information for these 37 records, this will not be included with the paper.*

There are two options we would like to propose to the PREDICT EB.

1. Retain the 37 publicly available bat species-virus associations from PREDICT-1 and include the PREDICT Consortium as a coauthor.
2. Remove the 37 PREDICT-1 records, and analyze data only from the literature.

Hi PREDICT EB,

Just a reminder about our call this week Wednesday August 9, 2017 at 9AM PDT/12PM EDT. I'll follow up with an agenda shortly.

Best,

David
